The Project started with three group members but unfortunately one of the team members had to leave due to which we just have two subsystems.

Subsystem 1
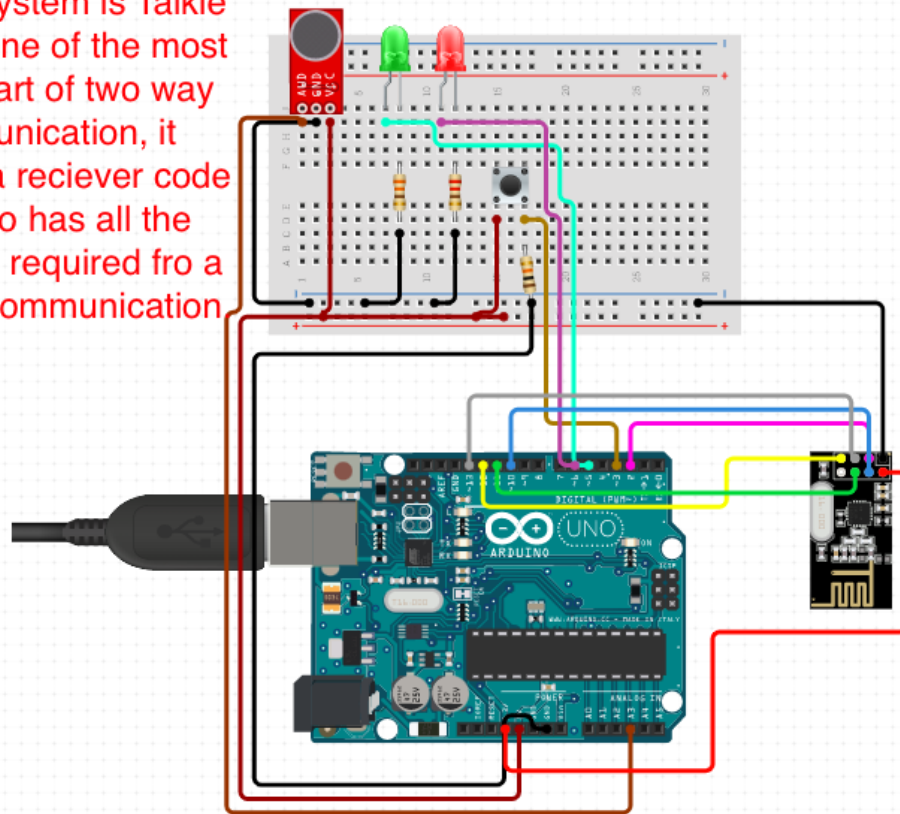

Deep Patel - Tallkie-1
This subsystem is Talkie -1 it an important part fo the two way communication that we have created in our project. It contains the transmission side of the code and also have most of the hardware required for communication.

Krish Patel - Talkie 2
The susbystem is Talkie 2 and is one of the most crucial part of two way communication, it contains a reciever code and also has all the hardware required fro a two way communication

Both subsystems use the NRF24I01 chips in order to communicate between each other; they also have some extra ports that can facilitate more hardware.
